## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Ovshinsky et al (U.S. Patent 5,523,182). Regarding claims 1-3 and 5, in column 26, line 45 et seq., the reference teaches a method of preparing a positive active material by chemically oxidizing nickel hydroxide and then either chemically or electrochemically reducing it. Regarding claims 2 and 3, a cobalt compound is coated on the surface of the nickel hydroxide (see col. 26, line 55 et seq.; col. 25, lines 33-41). Regarding claim 3, the cobalt compound is oxidized to a higher order by treating in an alkaline solution (see col. 26, lines 17-19 and lines 60-62). Regarding claim 6, a positive electrode comprises a porous substrate and a slurry of the active material and a binder (see col. 10, lines 31-37; col. 21, lines 44-50). Regarding claim 7, an alkaline storage battery comprises the positive electrode, a negative electrode, a separator, and an alkaline electrolytic solution (see col. 6, line 25; claim 5 of the reference).

Thus, the instant claims are anticipated.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ovshinsky et al. in view of JP 11-144723.

Ovshinsky et al. is applied to claims 1-3 and 5-7 for the reasons stated above. However, the reference does not expressly teach that the average valence of the nickel is between 2.10 and 2.30, as recited in claim 4.

In the abstract, JP 11-144723 teaches a nickel hydroxide active material having an average nickel valence of 2.1 to 2.3.

Therefore, the invention as a whole would have been obvious to one of ordinary skill in the art at the time the invention was made because the disclosure of JP '723 would motivate the artisan to adjust the average valence of the nickel hydroxide of Ovshinsky et al. to be in the range of 2.1 to 2.3. In the abstract, JP '723 discloses that this "increase[s] the discharge capacity in a high-rate discharge of a battery." Accordingly, this would sufficiently motivate the artisan to adjust the average valence of the nickel hydroxide of Ovshinsky et al. to be in the range of 2.1 to 2.3.
